PhotoMos Relays

PhotoMos relays combine the advantages of standard electromechanical relays with that of solid state products. This combination allows very fast response times with very low leakage and exceedingly long life times. Reliability and lower input currents are also improved over conventional relays.

AQY210 and AQY214 Series are SPST solid state switches for applications such as high speed inspection machines, telecom and data communication equipment, instrumentation and security. Capable of switching both AC and DC voltages. Extremely small 4-pin SOP package.

AQV210, 212, and 214 Series are SPST general purpose switches for high speed, high performance switching.

AQV221 Series are solid state switches designed for switching high frequencies (RF) such as audio/visual signals as well as CD, VCR, and scanners, etc.

AQW214 and 414 Series are independently triggered dual switches available in either Dip, SMT or SOP package.

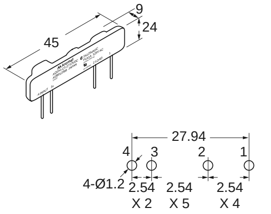
SIP Conformal Coated Solid State Relays



AQ2 SIP SSRs are designed as suitable drivers for AC motors, solenoids, valves, etc. These offer excellent noise resistance with an integrated snubber circuit and ultra thin body (only 9mm) for maintenance-free, long life switching. Zero-Cross is a low noise switching output whereas Phase Controlled are ideal for phase controlled applications such as motor speed control and light dimming.

CLARE

OptoMOS Solid State Switches

Figure 1 through 4:
Single and dual output solid state switches housed in a 6 or 8 pin dip package. Highly reliable bounce-free, arc-free switching with over 15 billion operations possible. UL, CSA approved and FCC compatible.

"TS" Series Telecom Switches (Fig. 5):
Incorporates an isolated solid state relay for hookswitch and dial pulse or loop start switching with a bi-directional Opto-coupler for ring detection and on-hook/off-hook detection. Eliminates up to eight discrete components.

Industrial Control and Instrumentation:
Figure 6: Dual linear optocouplers with a wide bandwidth and high gain (55 - 142%), available in either Dip, SMT, OR Flat package.

CPC1965 AC Solid State Relay (Figure 7, 8):
Robust to provide a blocking voltage up to 600V and is well suited for industrial environments where electromagnetic interference would disrupt the operation of electromechnical relays.

CPC10xxx and CPC11xxx Series (Figure 9):
World's smallest relays, produced by Clare, use state of the art double molded vertical construction packaging to offer board space savings of 20%.

Features high reliability with no moving parts makes these relays a great choice for Modem switching, Multiplexers, Meters, Medical equipment and Aerospace applications.

OMRON® Solid State Relays

Omron's G3VM Relays are PCB mounted solid state switches available in a variety of packages and configurations. Extremely low input current and small package make these ideal for microprocessor and logic switching relays. G3M and G3MB relays are larger current relays but offered in a SIP package to reduce board space. Perfect for controlling pumps, alarms, solenoids, etc. Comes with protective cover for safety. Phase controlled outputs are ideal for use in light dimming, motor-speed control, and other power control applications. Approved by UL and CSA.

The G3R relays are drop-in replacements to the popular G2R Eletromechanical relays. Perfect for compact Din-Rail mounting and applications requiring the long life of solid state relays. G3TC series are replacement to standard I/O modules. Replaces Opto22, Gordos and many other I/O modules. Perfect for multiple output controls.

Our line of pluggable input and output modules provide a low cost, versatile method for interconnecting real world analog and digital signals to data acquisition, monitoring, or control systems.

All modules provide an optically isolated barrier between sensitive microprocessor or digital logic circuits and field power devices. The case color of these modules identify their function: Digital AC Output Module = Black Case; Digital DC Output Module = Red Case; Digital AC Input Module = Yellow Case; Digital DC Input Module = White Case; Analog Output Module = Orange Case; Analog Input Module = Blue Case.

OpenLine Dual Package I/O Modules

OpenLine modules are dual density and shrink the space required for traditional racks by 50%. The OpenLine racks accept OpenLine modules which snap into place. Each dual module is controlled independently with filtered inputs and optical isolation.

Crydom's G2 series of SSR's feature extremely low RDSon, low leakage and long lifetimes. Crydom's SSR's typically comprise an optical coupler, the output of which either drives the line directly or is used to switch a high-power device, such as a silicon-controlled rectifier (SCR) or thyristor. Whatever the drive component, it's the optical-isolation and no-moving-part aspects of the device that grant its many performance features. These features include high I/O isolation (though leakage current is a problem), long life (measured in millions of cycles), low acoustic noise, no contact bounce/arcing, mechanical ruggedness, and low drive-current requirements. They are available in tube packaging for small quantities and prototype work. Tape and reel packaging for automated insertion equipment.

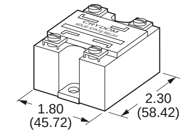
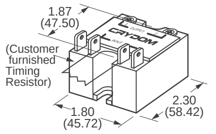
Relays combine small size and high ratings in a package designed for easy heat sink or panel mounting. Standard .187 push-on terminals assure quick connection and are arranged to provide maximum isolation between signal and power circuits. Model S228C is a snubberless design for applications that require low off-state leakage.

Fig. 2



Series PCV Analog Power Controller
The Series PCV Analog Input Power Controllers are 0-100% variable power controllers for 120 or 240 VAC loads which vary with an analog input of 2 to 10 Volts DC. The input and output are proportional by integrating a complete phase fired logic system and a solid state relay in the same package. Applications include heaters and lighting, motors and feeders, etc.

Fig. 3



Typical Turn-On Delay For Various Timing Resistances

Resistor	Time (DSD)	Time (DLD)
0 (Short)	0.10 sec.	1.6 sec.
10KΩ	0.19 sec.	3.1 sec.
100KΩ	0.94 sec.	15 sec.
470KΩ	4.0 sec.	64 sec.
1.0MΩ	8.3 sec.	133 sec.

Series DSD, DLD Time Delay Relay
These Delay-On time delay relays offer customers to externally adjust their delay time by selecting the value of the external customer supplied resistor. DSD are short time delays and DLD are longer time delay durations. Timing resistors should be 1/4 watt or higher.

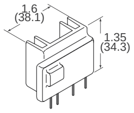
PF
Series

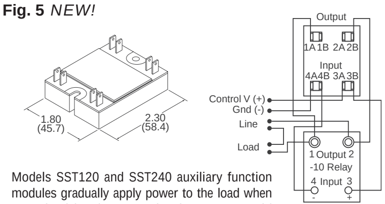
PowerFin™ series delivers the highest ratings of any single in-line package (SIP). The integral heat sink design can operate at 25 amps RMS in forced air at 85°C case temp. With natural convection in free air, it rates 10 amps RMS at 25°C ambient.



ASPF
Series

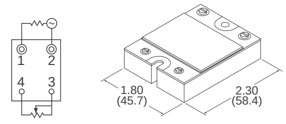
ASPF SSR incorporates the PowerFin™ design with an integral heat sink on the compact Mini-SIP package. Rated at 3.0 AMPS up to 45°C, this SPST-NO AC output SSR is for applications where precise electrical power control is essential. Zero voltage or random switching (R suffix) versions are offered.

Fig. 5 *NEW!*



Models SST120 and SST240 auxiliary function modules gradually apply power to the load when energized by the control voltage. Part sold complete with soft-start module and relay.

Fig. 6 *NEW!*



RPC series proportional controllers provide a cost effective method of controlling power in many different applications such as heaters, universal motors or incandescent lamps. A customer provided potentiometer is all that is required for control.

• Opto-Isolated • Solid state I/O switching modules deliver an electrically clean, photo-isolated, noise free "output" interface from logic level control systems to external loads such as motors, valves, solenoids, etc. DMP versions are epoxy conformal coated for fast heat transfer.

Series 6
Series 6 buffered output modules contain additional internal amplification to reduce drive requirements to a level suitable for the Mos devices used in many microprocessor systems. Models are available with either inverting or no-inverting inputs, for 5 and 15 volt logic.

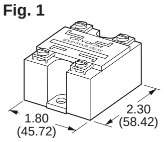
CRYDOM COMPANY

Solid State Relays

Fig. 1



Series 1, HD, HA: • These SPST-NO relays deliver proven reliability in the most demanding applications. Output consists of an SCR AC switch, available in either zero voltage turn-on or random turn-on, phase controlled models. (-10 versions are phase controlled. Crydom part numbers ending in "B" are normally closed versions.)

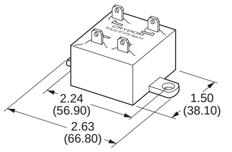
Series T: • Industry Standard Package • Snubbers are included for high DV/DT applications and inductive loads, together with zero-voltage switching to reduce inrush currents and electrical noise.

Series H12: • High voltage relays use IC driven circuits for switching loads up to 660 VAC with 1200 Volts blocking standard.

Series 1-DC: • Low On-State Resistance • Paralleling Capability for Higher Currents • DC output relays feature MOSFET technology for low on-state resistance, assuring easy paralleling and switching capabilities to 40 amps at 100 VDC.

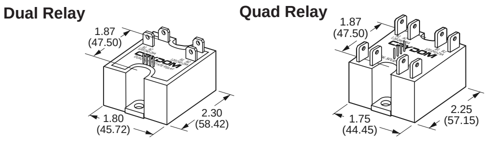
Series CS: • Low Leakage • SCR AC switch output models feature low off-state leakage (snubberless), zero-voltage switching and have a broadened operating range at both 120V/240VAC line voltages.

Fig. 2



Series EZ: • Low Leakage • Quick Connect Terminals • Offers a low profile package with the convenience of quick connect terminals • 4000 Vrms opto-isolation and low off-state leakage are standard.

Fig. 3

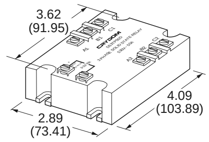


Dual Relay

Quad Relay

Two (Dual) or four (Quad) totally independent AC output relays come in a single standard panel-mount package. Utilizing an AC switch output with internal snubber, relays provide greater protection against false triggering.

Fig. 4



• SCR Output • AC or DC Control • LED Status Indicator Three-phase solid state relays switch up to 530 Vrms directly to loads such as motors, transformers, heating elements, etc. Models are available with either AC or DC input (coil). For heatsink use part number CC1114-ND.

Tight Seal IP68 Nylon Cable Grips (Glands) with Lock Nuts

Application: The use of synthetic cable grips is almost unlimited within the electrical and electronics industry. Installations where cables must be led safely through a wall of an enclosure will be specified with cable grips. Synthetic cable grips are specified to: • Secure the cable to the enclosure's wall to provide excellent pull-out resistance. • Seal and protect the inside of the enclosure from the unwanted affects of the environment. These contaminants may be water, gas, chemical vapors, or fumes. • Reduce material cost due to use of lighter, less expensive materials, as well as, eliminating the need for running conduit.

Technical Data:
- **Material:** Polyamide PA 6, Self-Extinguishing, Halogen-free
- **Seal:** Neoprene, Oil, and Petroleum Resistant
- **Operating Temperature:** Static (-40°C to 100°C), Dynamic (-30°C to 80°C)
- **Safety Class:** IP68, Waterproof (5 Bar)
- **VDE Test Report:** 12 796-9000-4001/A 2 J

3M Heat Shrinkable Tubing

KYNAR®, EPS-300, SFTW202 GYS, SFTW203, 8420 & 8440 Series

KYNAR® Series-Modified Polyvinylidene Fluoride: Shrink Temperature: 175°C (347°F). **Color:** Clear. **Shrink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high temperature resistance. This has outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial fuels, chemicals and solvents. Kynar® is a registered trademark of Elf Atochem North America, Inc.

EPS-300 Series-Adhesive-Lined Flexible Polyolefin: Shrink Temperature: 121°C (250°F). **Color:** Black. **Shrink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and waterproof barrier.

SFTW202 GYS Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Green and yellow striped. **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.

SFTW203 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Black. **Shrink Ratio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.

8420 Series-EPDM and 8440 Series-Silicone Rubber Tubes: Color: Black (8420 Series) and Gray (8440 Series). **Cold Shrink™ Insulators-**Open-ended, tubular rubber sleeves that are factory expanded and assembled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or adhesive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

SR-350 EPS-200, CP-221,& VFP-876, Series

SR-350 Series-Semi-Rigid Polyolefin: Shrink Temperature: 135°C, **Color:** Black, **Shrink Ratio:** 2:1. Ideally suited for strain-relief applications, wire marking, protective covering and packaging of delicate components.

EPS-200 Series: Shrink Temperature: 121°C, **Color:** Black, **Shrink Ratio:** 2:1 Rapidly shrinks to a skintight fit, forcing the melted adhesive lining to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and waterproof barrier. Rated for operation at -55°C (-67°F) to 110°C (230°F).

CP-221 Series-Commercial Grade Polyolefin: Shrink Temperature: 121°C, **Color:** Black, **Shrink Ratio:** 2:1. Recommended as a general purpose heat shrinkable tubing for new commercial applications where other types of tubing are now used.

VFP-876 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C, **Color:** Black, **Shrink Ratio:** 2:1. Most flexible of the heat shrinkable, polyolefin tubings. Ideal for jacketing and insulation of flexible wire bundles and sensitive components.

DABURN Polyolefin Heat Shrink

DAFLEX SM278 is a flexible, large ratio, heat shrinkable tubing with a meltable adhesive liner. As the outer wall shrinks, the inner adhesive liner melts and flows. When cooled, it offers protection for a variety of electrical applications as well as "sealed-in" protection from chemicals and oils.

Specifications: • **Shrink Ratio**: 4:1 • **Longitudinal Shrinkage**: 10% maximum • **Shrink Temperature**: 120°C (250°F) • **Continuous Operation Temperature**: -55°C to +135°C • Meets or exceeds MIL-I-23053/4 Class 3 • UL VW-1, CSA OFT (outer wall only)

DABURN Butyl Rubber Shrink Tape

DAFLEX ST250 cold shrinking Stretch-N-Seal tape requires no heat to provide a secure covering where the size and/or shape of an object does not permit the use of shrinkable tubing. Simply remove 2" to 3" of tape from the roll, remove the liner, stretch tape to 50% of the supplied width and wrap it spirally around the object, with 50% overlap. In minutes the tape will react with itself to form a mass which will provide protection from moisture, most chemicals, over 1KV per mil. **DAFLEX ST250** can be removed easily without leaving any residue since the tape does not use a mastic or adhesive liner. Shelf life is over 5 years. It is helpful for covering, sealing, splicing, holding bundles, joining and repair applications.

Specifications: • **Operating Temperature:** -40°C to +130°C • UL Approved for 80°C

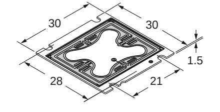
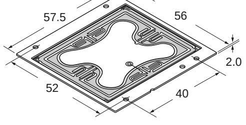
Card Type Speakers

WM-R30B



WM-R57A



Ultra-thin and ultra-light, these new card type speakers deliver a wide frequency range of high-quality sound. These amazing new Card Type Speakers from Panasonic are only 1/5th the thickness of dynamic speakers (comparing the WM-R57A with dynamic speakers which have the same dimensions). Based on newly developed, original technology, they deliver top-quality, low-distortion reproduction across a wide frequency sound. So small and light, they are ideal for applications that range from notebook PCs, PDAs, and other mobile communications to AV equipment and home electronics.

Key Features: • Ultra-thin, ultra-light design using a piezo ceramic diaphragm. • Outstanding broad-spectrum audio reproduction made possible by the two-way mechanical structure of the divided diaphragm, combining one large speaker for low-frequency sounds with four small speakers for high-frequency sounds. • Newly developed double construction damper and high polymer material minimize distortion, ensuring superior reproduction. • Because no coil or magnet is used, there is no leakage of electromagnetic radiation to interfere with magnetic media. • The vibrating membrane is covered completely with a high polymer coating, to protect against dampness, dust, and corrosion.

Specifications: • **Storage Temperature:** -40°C to 70°C • **Operating Temperature:** -30°C to 60°C

Ultrasonic Ceramic Sensor/Transducer

Ultrasonic Ceramic Sensor consisting of a disc/bimorph type piezoelectric ceramic vibrator that is used as a sensor for transmitting and receiving ultrasonics in the air. Since the ultrasonic sensor has a resonance type vibrator, it is high in sensitivity and has outstanding sound pressure level.

It has wide applications for burglar alarm systems, automatic door openers, flow rate detectors, and remote-control systems in TV, home appliance and toys, etc.

Sensors are not washable.

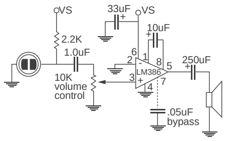
Panasonic® Electret Condenser Microphone Cartridge



Consists of a high voltage internal electret membrane, metal electrode and a Field Effect Transistor (FET). Doesn't need a high-voltage bias from the outside like ordinary condenser microphones. **Features:** Highly efficient electrical specification, pressure type operating principle, low impedance (2.2kΩ), omnidirectional back directivity, and a high degree of reliability under adverse shock, vibration and environmental tests. **Applications:** Telephone and telephone answering devices, tape recorders, intercoms, computer modems, completed microphones for recording, testing and monitoring, hearing aids, sonic controlled toys and sensors, and others. All buzzers and microphones are non-washable.

HORN INDUSTRIAL Electret Condenser Microphone

Electret condenser microphones consist of a high voltage internal electret membrane, a metal electrode, and a field effect transistor (FET). Horn Industrial microphones are manufactured in a quality controlled facility in China. All microphones are produced with Japanese made FETs to ensure high quality and reliability. This along with 100% testing ensure a zero defect rate. Horn's commitment to quality has earned them approval from a famous global manufacturer of mobile phones. Horn's ECMs utilize a highly efficient, low impedance design, available in omni directional, unidirectional, and noise canceling versions. Typical applications are telephone and telephone answering equipment, tape recorders, intercoms, hearing aids, and sonically controlled games and toys. All microphones are non-washable.

Dual Lock™ Reclosable Fastening Systems

When Dual Lock brand Reclosable Fasteners are pressed together, hundreds of mushroom-shaped stems interlock with one another. An audible snap announces that the closure is locked. Compared to hook and loop fasteners, you get improved tensile strength with five times more holding power. Open and close hundreds of times during the life of your product. Depending on the applications, you can select either plain-backed or adhesive-backed versions. Plain-backed versions can be easily sewn, stapled or ultrasonically bonded in place. Adhesive-backed versions are available for bonding to bare or painted metal, many plastics including plasticized vinyl, plus wood, glass and more. Mating Type 400 and Type 170 stems provides the most universal Dual Lock fastener combination. As an alternative when the closure involves two flexible surfaces, Type 400 can be mated with itself. For even greater strength closures with limited openings and closing, Type 170 can be mated with Scotchmate Loop Products. **Plain-backed:** Sew on or staple. Wash or dry clean. • Operating Temperature: -20°F to 200°F (-29°C to 93°C) **Pressure sensitive rubber adhesive:** General purpose. Bonds to most surfaces. • Operating Temperature: -20°F to 120°F (-29°C to 49°C) continuous. **Pressure sensitive very high bond Scotch™ VHB™ acrylic adhesive:** High performance for aircraft, automotive, business equipment, electronics. Resists harsh wet/dry, hot/cold cycles. • Operating Temperature: -20°F to 158°F (-29°C to 70°C) continuous ***Note: Roll length is 50 yards (45.72 meters)***

Wire Saddle

Wire Saddles are ideal for routing wires or optical fiber. Wires can be easily inserted into the top side of the saddle to protect them from abrasion. The “micro” is ideal for low profile applications and takes up very little real estate.

The MOFNSA is designed to snap into a .125” diameter hole in a .093” thick panel for applications that require a thicker board than the standard 1/16” board.

CITIZEN Thermal Printers

THERMAL PRINTERS:
Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Citizen offers a thermal serial printer and a thermal line printer. The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:
Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

NOTE: CBMA now markets the former Panasonic line of Thermal Printer Mechanisms. Please call Digi-Key for details.

Magnetic Hydraulic Circuit Breaker W67, W68, W69, W91, W92, W93 Series

Fig. 1

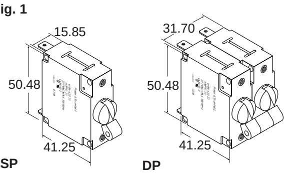

Fig. 2

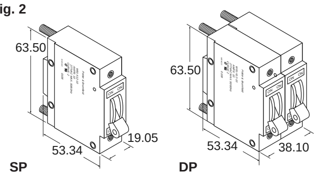

The W6/W9 series are designed for the international market. Magnetic hydraulic breakers are a proven design where the hydraulic delay provides tripping that is highly tolerant to changes in ambient temperatures. W9 units have ON/OFF molded into the area at the base of the toggle.

- **Calibration:** Breakers will hold 100% of rated current. Breakers may trip between 101% and 124% of rated load. Breakers must trip at 125% of rated load and above.
- **Operating Temperature:**
-40°C to +85°C.

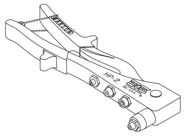
Hand Rivet Tools

HP-2®/39000



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32". 1/8". 5/32" and 3/16") and a service wrench.

VME/DIN Backplanes

Vector Monolithic Series back planes are designed to meet VMEbus Specification Rev C1 and Rev D. All termination is placed inboard of the two end connectors to allow the maximum number of slots (21) in a 19” RETMA rack. Decoupling capacitors are provided at the ends. The resulting improved power distrubution as well as signal shielding in ground layers creates a high performance back plane with low signal cross talks. Press-fit 96-pin DIN connectors are used. AutoBusGrant (ABG): This option calls for the replacement of standard connectors with 96-pin connectors with automatic switching capability mechanically built in. They eliminate the need for manual jumpering entirely. The “P” series which uses a 10-pin power block or “bug” and #6-32 hardware or the “M” series which uses a combination of power bugs and Mate-N-Lok connectors.

SMT Adapter Boards

Surface mount components are soldered to pads on boards. Traces extend from pads to prototyping holes on standard 0.1" x 0.1" (2.54mm x 2.54mm) grid. Individual leads can be monitored or other components can be added to evaluate performance of surface mount product. Saves time and prototyping cost. All boards made with FR4 laminate, and featuring ground plane on back side. Pad to pad spacing (pitch) is measured in mils (thousandths of inch).

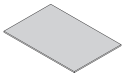
Uncoated Copper Clad Boards



All boards are made from FR4 material. 1/2 oz. copper is ideal for shorter etching times and very fine trace lines. Use 2 oz. and thicker for higher current applications and heatsinking. 1/16 inch thick boards are standard with thinner boards offering board flexibility and reduced weight.

SURFBOARDS® by CAPITAL ADVANCED TECHNOLOGIES INC.™

The Breadboarding Medium for Surface Mount

The Surfboard Concept: The concept behind SURFBOARDS is elegantly simple. Many models incorporate foil patterns that are designed to accommodate a wide variety of component mounting footprints. SURFBOARD® models for SOICs and PLCCs provide standard mounting footprints for the IC and depending on the model chosen, will include a prototyping area for additional components or provide a direct pin-out. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • Finish: Level 60/40 Solder alloy • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

Application-Specific Adapters

- **Accept Wide Range of Surface Mount Discrete Semiconductors and ICs**
- **Provide Convenient Medium for Prototyping, Test, and Development**

The 33000 Series of Surfboards® are application-specific adapters that convert surface mount component footprints to Single-In-Line (SIP) format. The boards feature pre-installed pins on .100" (2.54mm) centers making them compatible with conventional breadboards, solderless breadboards, and sockets. The SIP format provides ease of signal probing as well as higher densities when prototyping. Models are available to accept a wide range of surface mount semiconductors and integrated circuits.

Models 33113 and 33623 feature two SIP pins for each pad for higher current applications. Model 33213 features large soldering pads as connection points and SIP pins for measuring purposes. Boards are .031" ± .005" (.79mm ±.13mm) thick FR-4 and feature solder-coated 1-oz. Circuit Foils that can be hand-soldered or soldered by most conventional processes.

SIP pins are soldered in place on .100" (2.54mm) centers. All boards feature solder mask to limit flow of solder to pad area and aid assembly. Just add parts and plug in.

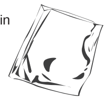
3M Static Control Products

Reusable Transparent Static-Shielding Bags



(2100 Series Metal-Out): 3M 2100R bags are produced with a proprietary "metal-out" construction in which the shielding layer is very near the exterior surface. A thin abrasion-resistant coating protects this metal surface from scratches, but still permits measurement of electrical continuity with common volt-ohmmeters for easy verification of shielding performance prior to reuse.

Economy Static-Shielding Bags

(1900 Series Metal-In): Use these more economical Static Shielding Bags for less demanding applications where reuse and high durability are not a prime consideration. The metal-in aluminum vapor coating is on a thinner 0.48 mil polyester as opposed to the 0.92 mil polyester in the 2100 series.

Economy ZipBag Static-Shielding Bags

(1910 Series Metal-In): The 1910 features a dual track closure for easy opening and closing.

Wrist Strap Workstation Monitor

The 3M 724 Wrist Strap Workstation Monitor continuously verifies the resistance of the operator and work surface ground connections. The monitor uses a reliable resistance method that actually includes the operator's skin resistance to determine if the system is operating properly. If the operator's resistance exceeds 10 megohms or 35 megohms, or the wiring connections exceed 3.7 megohms, audible and visible alarms are triggered. The unit will also warn of potentially dangerous low-resistance situations.

The monitor uses the light and compact dual conductor wrist strap. Dual conductors provide the resistance circuit that is monitored as well as provide grounding redundancy. If one conductor fails, the other will still function to prevent sensitive components from being exposed to static.

Comes complete with a quick connect/disconnect 732 Remote Jack and mounting hardware. 6.5 in. x 3.25 in. x 1.5 in. (162mm x 82mm x 38mm)

Dissipative Mats

8200 Series:

Vinyl mats are soft table and floor mats with a unique three-layer construction. The top layer is durable static dissipative vinyl, which has sufficiently low resistance to discharge static-laden conductors, yet will prevent the shorting of pins on the backs of printed circuit boards laid on the mat.

8200 Series Floor Mats includes one 15 ft. (4.6m) 3040 Ground Cord and two 3050 Snap Fasteners (installed).

8210 Series Table Mats includes two 3M 3050 Snap Fasteners (installed) and one 3M 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8800 Series:

Rubber mats consist of a top layer of static dissipative rubber laminated to a bottom layer of conductive rubber. Both layers are made from vulcanized synthetic rubber, which offers excellent resistance to oil, grease and most common solvents. They offer superior resistance to heat and hot solder as compared to vinyl or olefinic materials.

8810 Series Table Mats includes two 3034 Snap Fasteners (installed) and one 3048 Wrist Strap Grounding System.

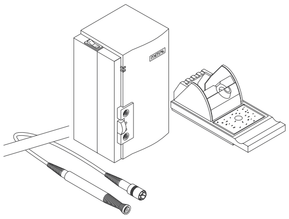
MX Series Rework Soldering Systems and Replacement Parts

Features:

SmartHeat® Technology. Metcal's tip cartridges sense the load and instantly adjust power to quickly deliver the right amount of heat precisely where it is needed. Metcal systems use SmartHeat® technology that is incapable of overshoot and can deliver high throughput at lower temperatures. Because the interchangeable SmartHeat® cartridges contain a heater and temperature self-regulating alloy, Smart-Heat® systems require no calibration. SmartHeat® technology systems need no dials or readouts, tip cartridges specify the temperature by series, providing continuous temperature for fast, easy, and safe soldering.

Metcal's Talon® easy-squeeze design makes removing SMD components a snap. Talon® was designed with ergonomics, style, and superior performance in mind. Beveled edge tips allows rework of several different components without changing tip cartridges.



Includes: Two port systems, workstation, sponge and cartridge removal pad.

CHIP QUIK® SMD Removal Kits

CHIP QUIK SMD rework products are designed as a low cost way to rework SMD components including QFP and PLCC packages, with very low temp. (300°F). It virtually eliminates damaged pads and circuitry or lost boards due to heat damage. SMD1 contains everything needed for removing SMD components with either convection (hot air) or conduction (solder iron). Use SMD16, SMD32, and SMD291 for larger jobs which require more CHIP QUIK material and flux. SMD2000 kit is a complete Solder/Desolder rework kit for safely removing SMD components, cleaning the pads, placing component and reapplying solder safely with low operating temps. Approved by many top industry PC board manufacturers for reworking faulty components, without the need for specialized solder equipment.

CHIP QUIK removal alloy-no lead formula has been tested for rework on PC Boards that were manufactured with lead and no-lead solders with excellent results on both. It has also been successfully tested for SMD removal on all the major no-lead solders that are presently available in the industry.

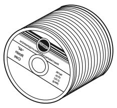
"331" Organic Water Soluble Flux



Kester "331" Organic Flux is a water soluble formula for use in flux-cored solder wire. Kester "331" flux is more effective than rosin fluxes in soldering difficult metals and allows a simple water wash for flux cleanup. The flux is more heat stable than most organic fluxes, resulting in minimal smoke and odor. The residue can be completely removed with a simple water rinse. Kester "331" is classified as type ORH1 per IPC ANSI/J-STD-004. Red Label.

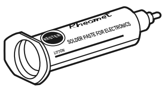
Solder Paste



Kester solder paste was developed for applications of surface mount PCBs and components. All pastes are SN63/PB37 with a mesh size of -325 to +500 (25 to 40 microns) and come in 35gm syringes for hand dispensing. R276 No-Clean formulation provides optimal performance in all types of dispensing applications. Designed for reflow practices that don't require cleaning of the PCB. R500 Water Soluble solder paste is aggressive enough to remove tenacious oxide layers and offers excellent wetting characteristics. **Pastes should be refrigerated to preserve their usable life.**

Note: To ensure customer satisfaction and product integrity, pastes must be shipped overnight or 2nd Day Air only. Tips are not included.

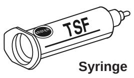
Rosin Paste



Syringe

Kester flux pens use a spring-loaded tip to dispense just the right amount of flux while preventing the flux inside from drying out. Tacky Solder Flux is a No-Clean paste flux that maintains its characteristics for up to 8 hours after dispensing and can be used in a wide range of temperature and humidity conditions. Can reflow in both air and nitrogen environments. SP244 is a mildly activated rosin paste flux designed to be used as a No-Clean formula for rework applications.

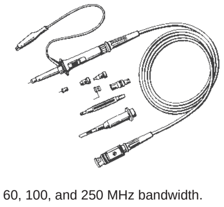
High-Performance Oscilloscope Probes

IEC 1010 Category I or Category II Compliance

It is important that you select a probe with the same bandwidth or "frequency range" as the oscilloscope used for the job. For example, if you're using a 100 MHz oscilloscope, choose a probe with a minimum of 100 MHz. To achieve optimum performance, choose a probe with more than twice the bandwidth of the oscilloscope.



Category I

This slim design comes equipped with interchangeable cables, probe tips and grooved heads. Compensation adjustment placed in the BNC eliminates noise and interference related pickup. Available in switchable and non-switchable versions.

Category II

This versatile design offers three monolithic interchangeable probes in 60, 100, and 250 MHz bandwidth.

Panasonic® Sealed Lead-Acid Batteries (Valve Regulated)

GENERAL FEATURES: *"DO NOT LEAK!!"*

• **High Quality & High Reliability:** The LCR battery has stable and reliable capacity. 100% tested on line for voltage, capacity, and seals. And all vents are 100% visually inspected during the final assembly process.

• **High Power Density:** These batteries save installation space, while providing full and reliable power for the equipment, and many have been designed for rapid recharge, or for high power output.

• **Leak-resistant Structure:** The LCR battery uses an absorbed electrolyte system. The LCR batteries have exceptional leak resistance, **and can be used in any position.**

• **Long Service Life; Flat or Cyclic:** The LCR battery has long life in float or cyclic service.

• **Easy Maintenance:** There is no need to check the specific gravity of the electrolyte or to add water during the service life. Totally sealed, and needs only charging for maintenance.

• **No Corrosive Gas Generation:** There is no corrosive gas generation during normal use.

• **Exceptional Deep Discharge Recovery:** LCR batteries have exceptional deep discharge recovery and charge acceptance, even after deep or prolonged discharge.

• **DOT & IATA Approval:** Transportation; The SLA batteries should be handled as common cargoes for both air and boat shipping.

• **U.L. Component Recognition:** U.L. Component Recognition under UL924, Section 38, for Emergency Lights and Power Supplier (not UPS), requires that the battery safely vent when overcharged, and tested under mineral oil. It further requires that the equipment and battery be submitted together for formal UL approval. **(UL Component Recognition does NOT remove this requirement for complete package testing).** The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

Panasonic® Nickel-Metal Hydride Batteries and Tabbed Versions

Features: • **Superior Energy Density:** Nickel-metal hydride batteries have approximately double the capacity compared with Panasonic's standard Ni-Cad batteries
• **High Cycle Life:** Like Ni-Cad batteries, nickel-metal hydride batteries can be repeatedly charged and discharged up to approx. 500 cycles (under ideal conditions). **Because a specially designed charger will be necessary,** please consult the Panasonic Technical Handbook (P001-ND) regarding the charge system • **Flat trickle charge cannot be used**
• **Excellent Discharge Characteristics:** Since the internal resistance of nickel-metal hydride batteries is low, continuous high-rate discharge up to 3C (10C for 4/5SC, SC) is possible in the same way as for Ni-Cad batteries.
• **Excellent Reliability:** Self-discharge performance is the same or better than that of nickel-cadmium batteries. In addition, charging batteries after extended storage restores original battery capacity. Battery safety has also been improved and verified through testing under a wide range of conditions of use.

Applications: • Communication • Office Automation • Audio Visual Equipment • Other High-Tech Products.
Caution for Safety: Improper usage may cause battery liquid leakage, heat generation or explosion, resulting in equipment failure or injury • Do not disassemble or rework the battery • Do not solder the battery directly • Do not use new batteries together with old batteries, or different type batteries mixed together • Follow the specified charge conditions.
Note: Battery Packs made with NIMH Cells include a thermostat from Texas Instrument.
Note: Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.
It is the responsibility of each user to ensure that each battery application system is adequately designed safe and compatible with all conditions encountered during use, and in conformance with existing standards and requirements.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic® 5-Hour Nickel-Metal Hydride Fast Charger with Batteries.

Features: This charger comes with 4 rechargeable Ni-MH 1600mAh AA Batteries. This versatile charger can charge both Ni-MH and Ni-Cd (nickel cadmium) batteries in AA and AAA sizes. These New Ni-MH batteries are the most powerful rechargeable batteries designed by Panasonic to date. They have no memory effect whatsoever and can be charged multiple times. Can use P060-ND (AA) or P051-ND (AAA) as additional batteries if needed. Not for use with flat top batteries.

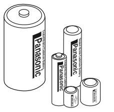
Panasonic® Nickel Cadmium Batteries



The Panasonic nickel-cadmium battery is a rechargeable sealed nickel-cadmium alkaline cell.
Features: • Long life • Excellent discharge characteristics • Long shelf life • High-rate charging • Wide temperature range • Reliable, self-resealing vent • Sealed, strong, leakproof construction
Applications: ***For Cyclic Use:*** • Consumer applications • Office equipment • Tools • Photography • Toys & Hobby. ***For Trickle or Float Charge Use:*** • Emergency devices • Memory back-up
Special Purpose Batteries: Rapid-charge "R" Type: The "R" type cell has a specially improved negative plate with increased gas absorption characteristics. It can be subjected to controlled charging at the 1C rate and rapid-charge in 1 to 1.5 hours is possible. High-temperature "H" Type: By using a polypropylene separator, the "H" type cell can withstand a temp. of 65°C (149°F) during use. When charging is conducted at a low charging current of C/20 to C/30 in a high-temp. ambient, the "H" type cell has a sharply improved capacity compared to a standard cell, due to special electrolyte. High-capacity "E" Type: The extra capacity cells combine a high-capacity density positive plate with a high-density paste negative plate. These cells have 20~30% more capacity than equivalent standard cells. Super High Capacity & Rapid Charge "S" Type: Super high capacity and rapid charge "S" type batteries are ideal for today's high capacity needs. They feature increased capacity & rapid charging within approx. 1 hr. The high-density positive base material of foam nickel is combined with the pasted negative plate to produce a capacity approximately 40% greater than that of the rapid-charge "R" type battery of the same size. High Rate Discharge & Rapid Charge "R/P" Type: This rapid charge, high rate discharge type has been developed through the integration of all Panasonic battery technology. It employs unique plates featuring unsurpassed gas absorption characteristics & a current-collecting system to provide charging in just 1 to 1.5 hours. The internal resistance is also greatly reduced for improved voltage characteristics during high rate discharge at approximately 10CmA.

Panasonic® Lithium Batteries

The main features of lithium batteries are as follows:

- **High Voltage:** Nominal voltage is 3V, which is nearly double that of other batteries which use the aqueous electrolyte system, such as manganese dry batteries, and silver-oxide batteries.
- **High Energy Density:** Overwhelmingly high energy density, as compared with conventional batteries and other lithium batteries. The energy density is 5 to 10 times higher than that of manganese dry batteries.
- **Long Service and Shelf Life:** Since Panasonic lithium batteries are composed of chemically and thermally stable material, self-discharge is extremely small. Deterioration when stored at room temperatures is ca. 0.5% annually – worry about deterioration is unnecessary.
- **Stable Flat Discharge Voltage:** Since conductive carbon is continuously formed during discharge, internal impedance does not increase until the end of discharge, thus stabilizing discharge voltage.
- **Excellent Temperature Characteristics:** Organic solvent ensures a low electrolyte freezing point so that the batteries can be used in a wide temperature range, -40°C to 85°C is standard (-40°C to 125°C for the High Temperature Coin Type; -40°C to 70°C for Camera Type; -30° to 60°C for CR2004/P9A).
- **BR Types versus CR Types:** BR, or (CF) n/Li, batteries provide a more stable voltage particularly during the last half of discharge, while CR, or Mn02/Li, batteries provide a higher voltage during the first half. CR batteries also can provide a higher current capability than BR batteries. In storage, BR batteries perform better at high temperatures. These characteristics must be taken into consideration when selecting a battery for a particular application.
- **UL Approval:** Panasonic Lithium batteries are UL recognized. UL File No. MH12210.
- **DOT Exemption:** Panasonic lithium cells and multiple cell batteries are authorized for transportation, in commerce, by U.S. shipping exemption DOT-E7052.
- **Disposal Information:** Panasonic lithium cells are not an EPA listed hazardous waste, but may be considered a "characteristic" hazardous waste. Lithium metal, the anode component of the cells, is considered by the U.S. EPA to be hazardous when disposed because it is reactive with water. However, a cell which contains a small quantity of lithium metal is not necessarily a hazardous waste. Disposal regulations and policies are different in each State and are subject to frequent changes. Contact your local jurisdiction for specific advice on disposal.

Panasonic® Manganese Lithium Rechargeable Batteries (ML Series)

Features:

- **Charging at voltage levels even under 3V**. In order to support the current trend in ICs toward lower voltages, these batteries can be charged at a 3 ±0.2 voltage level, and this makes it easier to set the charging circuits for the circuits which employ 3V ICs.
- **Large capacity for hour-after-hour back-up.**
- **Excellent withstand voltage characteristics.** These batteries can withstand the application of a continuous 3.2V voltage at a high temperature of 60°C (140°F).

Applications:

- Power source for backing up memory data in mobile telephones, personal handyphone systems, memory cards, pagers, data terminals and office automation equipment.

BOURNS Multifuse Resettable Overcurrent Protectors

Bourns' Multifuse products provide overcurrent protection against circuit faults and safeguard against potential overcurrent damage of critical circuitry and loads in a vast amount of applications. This series is made of highly conductive, carbon black loaded polymer material. When a short circuit occurs, the devices start to heat rapidly until they reach a critical temperature of approximately 120°C. At this point the densely packed crystalline polymer matrix changes to an amorphous structure as it undergoes a phase transformation. Resistance increases by many orders of magnitude. The material will stay in this high-resistance state as long as the power is applied. The device will remain latched, providing continuous protection until the fault is cleared and the power is removed. With the fault removed the resistance quickly returns to its original value and the device is ready to operate again. **Agency Approvals:** The MF-R & MF-RX product families have UL, CSA, and TUV recognition to 30 volts. UL #E17454S, CSA #CA110338, and TUV #E9772255.01

MF-SM SERIES: This series is a SMT PTC Resettable Fuse designed for applications anywhere there is a low voltage power supply and a load to be protected including computers and peripherals, general electronics and automotive applications. They are fully compatible with current industry standards. Packaged per EIA 481-2 standards. **Agency Approvals:** UL #E17454S, CSA #CA110338, and TUV #E9772255.01

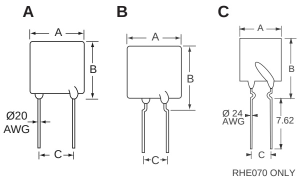
PolySwitch **Resettable Devices**

PolySwitch resettable devices protect electrical and electronic circuits against excessive current, voltage, and temperature. After switching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-heating current. The device will reset only after it has cooled and the fault condition has been corrected, thus avoiding continuous cycling that could cause circuit damage. The device requires no manual resetting or replacement.

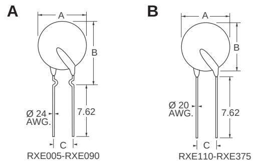
Definitions: Maximum Voltage: The highest voltage the device can withstand (in its tripped state) without damage. Hold Current: The maximum continuous current that will not cause the device to trip at 20°C. Trip Current: The minimum continuous current that will cause the device to trip at 20°C. Maximum Current: The largest fault current, at rated voltage, the device can interrupt without being damaged. Maximum R: Maximum non-tripped resistance of the device.

Fig. 1 — RGE and RHE Series



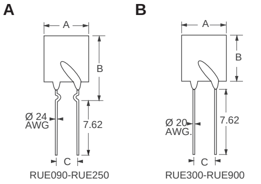
This product series can be used in a wide variety of automotive, computer and general electronics applications. The RGE devices feature high current carrying capability (up to 13 amps) in a small package with fast trip times.

Fig. 2 — RXE Series



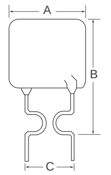
These products function as the general purpose line of circuit protection devices and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXE series range in hold currents from .05 to 3.75 amps and complement the RUE devices by providing a higher voltage rating.

Fig. 3 — RUE Series



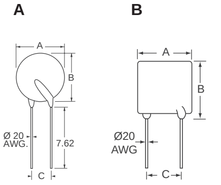
These devices are also designed to be used in a wide variety of general electronics applications. They complement the RXE series by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

Fig. 4 — RTE Series



RTE series polyswitches are specifically designed for IEEE-1394 applications.

Fig. 5 — LVR Series *NEW!*



This product extends the proven PolySwitch technology of resettable overcurrent protection into higher voltage applications.

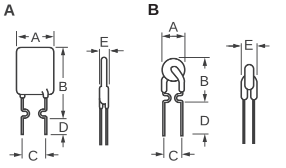
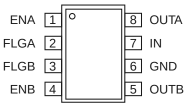
Fig. 6 — RUSB Series



New PolySwitch RUSB devices are designed to meet USB and safety agency requirements. The RUSB family of leaded resettable devices offers overcurrent protection for USB applications.

Fig. 7 — RYC Series Power Distribution Switches

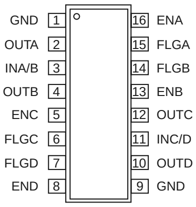
A — SO-8



This series is designed for USB self-powered hub applications such as notebook PCs, self/bus-powered stand-alone USB hubs, USB bus-powered hubs in keyboards and USB peripherals such as CCD cameras. They help provide efficient and reliable power switching and in-rush current limiting capabilities.

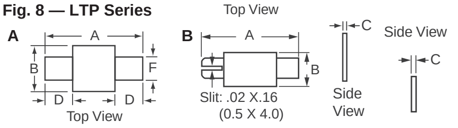
These USB power distribution switches enable power to USB ports upon USB controller commands. The switches signal the controller when faults such as overcurrent, over-temperature, under-voltage lock-out (UVLO) or over-voltage lock-out (OVLO) are detected.

B — SO-16



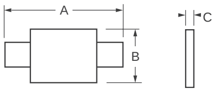
SO-8 Pin No.	SO-16 Pin No.	Pin Function
1 and 4	5, 8, 13, 16	Enable (Input): Logic-compatible enable input. High input > 2.1V typical. Low input <1.9V typical
2 and 3	6, 7, 14, 15	Fault Flag (Output): Active-low open-drain output. Indicates overcurrent, UVLO, OVLO and thermal shutdown
6	1, 9	Ground: Supply return
7	3, 11	Supply Input: Output MOSFET drain. Also supplies ICs internal circuitry. Connect to positive supply
5 and 8	2, 4, 10, 12	Switch Output: Output MOSFET source. Typically connect to switched side of load

Fig. 8 — LTP Series



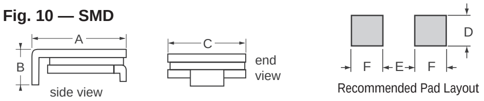
Similar to the SRP family of PolySwitch strap products, LTP devices help provide reliable, noncycling protection for rechargeable batteries and have a slim, low-profile design that makes them easy to install. LTP devices also offer additional protection at elevated temperatures.

Fig. 9 — SRP Series



These products help provide reliable, non-cycling protection for rechargeable batteries. Weldable nickel leads and a narrow, low-profile design make these devices extremely easy to install on the edges of battery packs.

Fig. 10 — SMD



This product series is specifically designed for surface mount applications. The products range in hold currents from 0.3 amps to 3.0 amps and voltages from 6 volts to 60 volts. These devices are ideally suited for high density board applications in computer and computer peripheral products, telecommunications and general electronics applications. They are designed to be reflowed onto a PCB using standard surface mount processes. Packaged per EIA-481 standard.

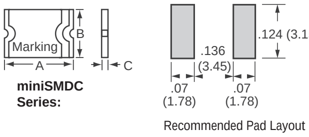
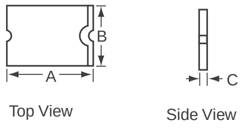
Fig. 11 — miniSMD



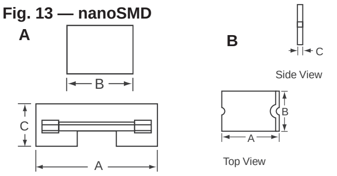
The miniSMD resettable devices extremely small size makes them excellent choices for keyboard and mouse ports, SCSI devices, battery packs, PC cards and sockets, cellular modems and phones, and portable electronic equipment. SMT packaging for automated assembly compared to SMD the miniSMD offers: 40% reduction in size, 300% faster time to trip, 50% reduction in DC resistance, 66% reduction in profile, 80% reduction in mass and drop in replacement for the NANO 2 device in many applications.

Fig. 12— microSMD



This product series is designed for surface-mount applications. Its smaller component size enables installation on crowded printed circuit boards and in small enclosures such as digital cameras, personal digital assistants (PDAs) and palm-top computers. The new low hold current devices are ideal for protecting industrial sensors and data acquisition systems.

Fig. 13 — nanoSMD



The nanoSMD series reduces the component size to a 1206 footprint, nearly half the size of the microSMD series and one-quarter the size of the popular miniSMD series. The industries fastest time to trip. Smaller size saves board space and cost. Compatible with high volume electronics assembly.

SiBar Thyristor Surge Protectors

SiBar thyristor surge protectors are designed specifically for telecommunications and computer telephony applications, including: • Modems • Fax machines • PBX Systems • Phones • POS Systems • Analog and digital linecards • Other customer premise and network equipment requiring protection.

Features: • Bidirectional transient voltage protection • High off-state impedance • Low on-state voltage • High surge capability • Short-circuit failure mode • Surface-mount technology • UL 497B recognized, file #E179610

SiBar thyristor surge protectors are bidirectional silicon devices that foldback in the presence of transient overvoltage faults. When the breakover voltage of a SiBar device is exceeded, the device switches from high to low impedance to protect sensitive downstream equipment from harmful voltage surges. The device remains latched in a low-impedance state until the current decreases below the hold current, at which point the device returns to its high-impedance state.

SiBar devices may be used in conjunction with PolySwitch resettable devices in telecommunications applications, including network equipment and customer premise equipment. Proper selection of both devices can provide reliable, self-resetting overvoltage and overcurrent protection, allowing designers to meet worldwide telecommunications standards and to lower equipment-service and warranty cost.

PTC Resettable devices utilize a unique polymer-based, Positive Temperature Coefficient (PTC) material to protect electrical circuits against overcurrent conditions.

PTC Resettable Operation: In normal operation, the Littelfuse PTC has many conductive paths and a very low resistance. In an overcurrent condition, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. However, once the cause of the initial overcurrent condition is eliminated, the Littelfuse PTC cools down and resets to a low resistance value permitting the normal current flow to resume.

Agency Approvals: • UL: Recognized under Components Program of Underwriters Laboratories • CSA: Recognized under Component Acceptance Program of the Canadian Standards Association • TUV approved

ELECTRICAL DEFINITIONS: • **Ihold**: Hold Current: maximum current device will sustain for 4 hours without switching at 20°C • **Itrip**: Trip Current: minimum current that will switch the device into a high resistance state at 20°C • **Isc**: Maximum short circuit current device can withstand at rated voltage • **Ril**: Minimum initial resistance of device at 20°C, prior to tripping • **Rat**: Maximum measured resistance in the nontripped state 1 hour post reflow with reflow conditions of 245°C for 20 seconds.

NOTE: *Devices are not intended to be used for continual, repeated tripping.* ***CAUTION:*** *Operation beyond the specified ratings may result in damage and possible arcing and flame.*

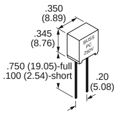
PC-TRON® Subminiature Fuses



Characteristics: Offers short-circuit performance which until now could only be found in much larger size glass tube fuses. At 250 VAC, the 1/2 to 3 amp PC-Tron can safely interrupt 50 amperes; at 125 VAC the 1/2 to 5 amp versions can interrupt 10,000 amperes. This makes the PC-Tron subminiature fuse ideal for line-side protection of power supplies. **Time Current:** • Carry 100% of rating for 4 hrs. min.; open at 200% of rating in 10 sec. max. **Construction Material:** • Body: High temperature plastic • Leads: Tin-plated copper **Agency Approvals:** UL Recognized and CSA Certified

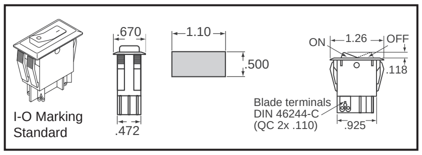
ETA circuit breakers for equipment are designed as safety critical items for protection during equipment failure. These circuit breakers may be required to operate just occasionally or very often during the life of the equipment and can confidently be reset by inexperienced personnel.

Thermal breakers respond in a similar manner as a slow blow fuse. All thermal breakers carry 100% rated current continuously and trip within one hour at 140% rating. Selection should be based on 125% of your maximum current required. Magnetic breakers are fast-acting devices which are highly tolerant to changes in ambient temperatures and sensitive to small overloads.

Combination Rocker/Breaker Switches



Miniaturized single pole rocker/thermal circuit breaker combining ON/OFF switching and extremely fast overload performance in a single component. Returning the rocker switch through the OFF position and back ON will reset the mechanism and restore the supply. Illuminated versions – 120VAC lamp **Applications:** Motors, transformers, solenoids, PCBs, hand-held machines, appliances, instrumentation. **Voltage rating:** AC 250V; DC 48 up to 10A UL/CSA **Typical life:** 30,000 operation cycles **Ambient temperature:** -40°C to +70°C **Insulation voltage:** 2.5kV **Dielectric strength:** AC 3,000V

NOTES:

1. **Rated Functioning Temperature** (UL: TF, CSA, VDE, BEAB: Tf). The temperature at which a TCO changes its state of conductivity to open circuit with loading detection current only. Tolerance: ▽ : ±7°C; UL, CSA, VDE, BEAB: 0 / -10°C
2. **Functioning Temperature** (Fusing-off temperature): The functioning temperature at which a TCO changes its state of conductivity to open circuit in the ambient air oven which increases temperature by 1°C per minute and with loading the detective current 0.1A or less.
3. **Maximum Operating Temperature:** The maximum temperature at which a TCO can be maintained while conducting rated current for 3000 h.
4. **Holding Temperature** (UL: TH, CSA: Th, VDE, BEAB: Tc). The maximum temperature at which a TCO can be maintained while conducting rated current for 168h which will not cause a change in state of conductivity to open circuit.
5. **Maximum Temperature Limit** (UL: TM, CSA, VDE, BEAB: Tm) The maximum temperature at which a TCO can maintain its mechanical and electrical properties without closing again for 10 minutes after a TCO has changed its state of conductivity.

‡ P10908-ND and P10910-ND are additionally approved for UL, on DC50V 5A.
† Std. DC Resistance is <15mΩ, A = <16mΩ, B = <17mΩ.

ThermaPro-V (TPV) DC Fans

Thermal Speed Control: This option uses a thermistor to monitor the temperature and regulate the speed accordingly. The fan will automatically adjust its speed to optimize the airflow to the surrounding temperature. For conditions where power inputs are at a minimum, the fan operates at half speed, providing a minimal amount of CFM to those components still in need of cooling. This reduction in speed results in a significant reduction in noise and power consumption. As the power requirements increase, so does the internal temperature. The fan senses this increase and compensates for it. The fan will continue to increase in speed until it reaches full speed for maximum cooling. The temperature range is 25°C to 45°C. Any temperature below 25°C the fan will operate at half speed. Between 25°C and 45°C, the fan RPM changes linearly with temperature. Over 45°C, the fan will maintain full speed operation.

Fans equipped with this option use a thermistor. The thermistor can be located on a zip cord and placed on hot spots such as processors, heatsinks, transformers, etc., or can be placed in the hub of the fan to monitor the air traveling through the fan.

Switchmode / High Frequency Inductors

Rod Core Inductors

DESCRIPTION:

TRIAD high current rod core inductors provide cost effective energy storage. By conditioning the output signal, the inductor smoothes out the current waveform to provide a more stable current. These low cost inductors are designed to be compatible with automated P.C.B. installation.

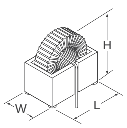
Toroidal Inductors



DESCRIPTION: TRIAD toroidal inductors condition the output signal by leveling out the current waveform providing a more stable current supply.

TECHNICAL NOTES: • Nominal inductance values are typically 10% higher than minimum rating. • Biased inductance measured at rated DC amps.

* Power Good: Power good output is high when the output voltage is within specification

† Inhibit: Power to complete part is shut off, quiescent current is less than 100 µA. Stnby: Standby Mode: Part is powered up, but output is in shut off or sleep mode.

(a) ISR will operate down to no load with reduced specification.
(b) See thermal derating chart.
(c) Input voltage cannot exceed 30V when the inhibit function is used.
(d) Operating temperatures below 0 (0°C), use tantalum capacitors.
(e) See manufacturer's safe operating area curves for appropriate derating.
(f) Carries standards and safety approvals — see manufacturer's data sheet.
(g) Do not operate below minimum load.
(h) PT6305 series can easily be paralleled to provide output current in multiples of 3 Amps. Please contact Texas Instrument/Plug In Power Solutions for application note.
(i) With pin 23 open, V2out = First voltage shown is on the output. With pin 23 shorted to pin 22, V2out = Second voltage shown in chart.
(j) For applications with input voltages greater than 7VDC, Use the PT78NR100 series.
(k) Io min. current of .10A can be divided between both outputs, V1 or V2.
(l) This series can be paralleled with a current booster slave to increase output currents in specific increments — see manufacturer's data sheet.
(m) Please refer to manufacturer's data sheet for further explanation of ratings.
(n) An electrolytic or tantalum capacitor on the output is required for proper operation.
(o) Only use an electrolytic capacitor for proper operation.
(p) Please use Panasonic low ESR, FC series capacitors for proper operation — see manufacturer's data sheet.
(q) Heat sink or tab orientation - see manufacturer's data sheet.
(r) Remote sense ground not used, pin 12 must be connected to pin 13 for optimum output voltage accuracy.
(s) Has an (OVP) over voltage protection drive output.
(t) Processor compatible voltage output adjustment — see manufacturer's data sheet.
(u) Do NOT operate the negative output rail of this ISR below the minimum load.
(v) Vo 1 and Vo2 Adjust can be pin-strapped to an alternative lower bus voltage. Consult the voltage adjustment application note information.

Non-Amplified Optical Sensors

Omron's optical sensors are designed to meet the needs of positioning, detection of components and objects, cam-timer switching-control and robotic control. Available in two types: nonamplified optical sensors are low cost, fast response optical sensors used mainly in design-in processes. Amplified optical sensors are ideal for plug and play applications where external light does not affect performance and wide input voltages can be applied.

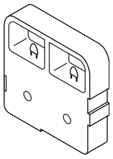
D6A Air Flow Sensor



The industry first D6A filter sensor contains a microprocessor with a complex algorithms that provides a temperature reference point to see if a filter fan is moving the right amount of air. If the sensor indicates it is not, then the user knows the filter is clogged. With its sensing capabilities, the D6A provides reliability protection, ensuring the dependability of continued operation of expensive equipment This clogged filter sensor is excellent for servers, high end routers and network devices. Other applications include uninterruptible power supplies and cash registers, and other types of machines that use a filter fan.

Specifications: • Supply Voltage: DC12V • Current Consumption: 60mA (Max.)

Inductive Proximity Sensors

Fig. 1

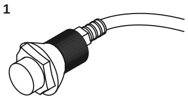

Fig. 2

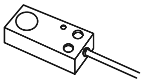

Omron's line of inductive sensors are designed for detecting the presence or absence of ferrous metal close to the sensor and provide an output when detected.

Because inductive sensors use electromagnetic fields, they excel over photo type sensors in environments containing water, oil, dust and dirt.

Shielded sensors are made with a shielding plate around the ferrite core to focus ferrous metal sensing at the sensors head. It also allows sensor to be located or mounted close to surrounding metals.

Panasonic Photo Interrupter

Photo Interrupters are a transmissive photosensor series in which a high efficiency GaAs infrared light emitting diode is used as the light emitting element, and a high sensitivity phototransistor is used as the light detecting element. The two elements are arranged so as to face each other, and objects passing between them are detected.

MICRONAS Hall Effect Sensor

FEATURES: On-Chip temperature compensation circuitry minimizes shifts in ON and OFF points and hysteresis over temperature and supply voltage. Ideal sensors for ignition timing, anti-lock brake systems, speed measurement, angular and linear measurement/positioning. Designed for use in hostile automotive and industrial environments.

SWITCHING SPECIFICATIONS:

Bipolar: Output turns low with magnetic south to branded side of package (open drain). **Unipolar:** Output turns low with magnetic south to branded side of package, output turns high if magnetic field is removed.

Latching: Output turns low with magnetic south to branded side of package, output does not change states when magnetic field is removed.

Differential: Output determined by magnetic south pole flux density between 2 internal sensors, output low with B_{S1}-B_{S2}>B_{on}, output high with B_{S1}-B_{S2}<B_{off}.

CHERRY

Solid State Magnetic Hall Effect Sensors

Cherry magnetic sensors are used to detect changes in magnetic field polarities and the motion of ferrous metals such as gear tooth movements. Used for such applications as speed and proximity sensing, magnetic polarity detection and current flow monitoring. Solid state design for unlimited life.

Features:

HE313500: Magnetically biased bipolar digital latch. Extreme sensitivity. Internal transistor switches on when exposed to south pole and remains on until north pole magnetic field is introduced.

MP100 Series: Aluminum threaded barrel sensor for speed and position sensing. The threaded barrel allows precise positioning and adjustment.

GS100 Series: Barrel sensors intended for gear tooth speed sensing. High speed capability, ideal for sensing power gears, conveyer speed and other rotating gears. Built-in magnet supplies its own bias field. GS101202 is plastic housing with steel bushing.

MLX90215: Programmable Linear Hall Effect sensor IC fabricated utilizing silicon-CMOS technology. It possesses active error correction circuitry which virtually eliminates the offset errors normally associated with analog Hall Effect devices. All magnetic response functions of the MLX90215 are fully programmable for even greater versatility. The V_{OQ} (V_{OUT}@ B=0), sensitivity, direction of slope and the magnitude of sensitivity drift over temperature, are all programmable.

The ratiometric output voltage is proportional to the supply voltage. When programmed for a conventional sensitivity (with a positive gain), the voltage at the ouput will increase as a **south** magnetic field is applied to the branded face of the MLX90215. Conversely, the voltage output will decrease in the presence of a **north** magnetic field.

Features: • Programmable Linear Hall IC • Quad Switched / Chopper Stabilized • Ratiometric Output for A/D Interface • Adjustable Quiescent Voltage (V_{OQ}) • Very Low Quiescent Voltage Temperature Drift • Adjustable Sensitivity • Adjustable Temperature Compensation of Sensitivity

Temperature Suffix: **E:** -40°C to 85°C (Commercial),
L: -40°C to 150°C (Automotive)

PTC-01: This programmer was designed for efficient and precise calibration of the Melexis family of programmable ICs. The programmer is designed to be easily adapted to a standard PC to allow calibration of programmable sensor ICs within the operating environment. The PTC-01 programmer contains its own programmable power supply and measurement circuitry. Similar to a standard EEPROM programmer, but adds special features such as 16 bit voltage and current measurement capability, and a configuration options that will accommodate users from the prototyping phase directly into production. An IBM compatible PC is required (not included) to load software to the programmer and control the functions of the programmer. DOS and Windows platforms are available, as well as source code and firmware. Communication is done through a standard RS-232 null modem cable to a COM port of the PC. The PC requires no custom configuration, allowing the programmer to be used with any PC with a COM port speed of 19.2kbs or better

Features: • RS-232 serial interface • 16-bit voltage measurement • 12-bit voltage adjustment • Compact design • Internal or external supply voltage • 4 lead SIP (50mil) • RJ45 External Connector • High-level functions in firmware

PC Requirements: Requires a PC capable of RS-232 serial communications of 19200 baud. The minimum PC requirements include a 486 or higher processor with 8MB or RAM and 4MB of available disk space.

Note: The Melexis supplied software may have additional PC requirements.

Hall Effect Sensor ICs

Panasonic's Hall IC is a combination of a Hall element, amplifier, Schmidt circuit, and stabilized power supply/temperature compensator integrated on an identical chip by using the IC technology. It amplifies Hall element output at the amplifier, converts into a digital signal through the Schmidt circuit, and drives the TTL or MOS IC directly.

Features: • Stable temperature characteristics due to the additional temperature compensator • TTL and MOS ICs directly drivable by output • Semipermanent service life due to no contact parts • Small change of the operating flux density against mechanical stress • Provided with the output pull-up resistors (typ 27kΩ or open collector output (see chart) • Operating Temperature:-40°C to 100°C (-40°C to 85°C for DN6851 - DN6853) • Supply Current Max: 6mA • Output Circuit Max: 20mA

Applications: • Speed Sensors • Position Sensors • Rotation Sensors • Keyboard Switches • Microswitches

Current Sensors

The SCD series current sensors are PC board mounted, Hall effect, open-loop devices which output a voltage equivalent to the magnitude of current sensed. Two basic sensing types are offered. Both are capable of measuring AC currents:

1. -XXN for detecting DC current and AC currents where ± input currents are represented as a + voltage only. **2.** -XXR for detecting DC current and AC currents. ± input currents are represented as ± voltage.

NEW! Current Sensors

Hall Effect Technology

Hall current detector measures the magnetic flux which is produced proportionally to the current, without any contact with the primary circuit by combining the magnetic circuit and the hall element. This results in no voltage drop in the measured circuit and is an ideal solution for measuring AC/DC with an excellent galvanic isolation.

Features: • Galvanic isolation between primary and measuring circuit, measurement of DC or AC (kHz) or both • No primary losses • Quick response • High reliability by simple design of circuit. **Specifications:** • Frequency Band Width (-3dB): L01Z: DC-30kHz; L03S: DC-50kHz; L08P: DC-20kHz; L10P: DC-50kHz; L16P: DC-30kHz (At higher frequencies derating is required to prevent core from overheating.) • Output Linearity: +-1% • Operating Temperature: -10 to +80°C • Insulation Resistance: more than 500MΩ - di/dt • Response Time: 5uSec. Typ.(10uSec. Typ. for L08P Series) • Specifications are measured at +25°C, Load Resistor 10kΩ, rated supply voltage (Vcc)

Model 85 – 316L:

This micro-machined piezoresistive silicon pressure sensor is designed for applications where compatibility with corrosive media must be maintained. The sensor chip is mounted on a TO style header, which is resistance welded to a 316 stainless steel package, sealing a small volume of silicone oil between the diaphragm and the sensor chip. The ISO pressure housing utilizes the oil column to couple the piezoresistive sensor to the isolation diaphragm. A thick film ceramic compensation board with laser trimmed resistors, and an additional gain set resistor to normalize pressure sensitivity are an integral part of the sensor package.

Model 86 – 316L:

This is a small profile, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing and is designed for O-ring mounting. The sensing package utilizes silicone oil to transfer pressure from the 316L stainless steel diaphragm to the sensing element. It is designed for high performance, low pressure applications. A ceramic substrate is attached to the package that contains laser-trimmed resistors for temperature compensation and offset correction. An additional laser-trimmed resistor is included which can be used to adjust an interchangeability to within ±1%.

Accelerometers – PC Board Mountable

Description:
These piezoresistive silicon accelerometers consist of a micro machined silicon mass suspended by multiple beams from a silicon frame. Piezoresistors located in the beams change their resistance as the motion of the suspended mass changes the strain in the beams. Silicon caps on the top and bottom of the devices are added to provide over-range stops. This design provides for a very low profile, high shock resistance, durability and built-in damping over a wide usable bandwith.

Features:
• ±0.5% Non-linearity, (typ.), ±2% max. (Best fit straight line; for full scale range of 10g or less) • DC Response • Built-in damping • Built-in overrange stops • Low power

Model 3031 - Surface Mount A piezoresistive silicon accelerometer intended for high volume applications where small size, light weight, and low cost are required. **Specifications:** • ±1.0% Temp. Performance (with comp resistors, typical) • Supply: 5.0 VDC (typ.) • Operating Temp.: -40°C to +125°C

Model 3022 - Adhesive Mount A piezoresistive silicon accelerometer packaged on a ceramic substrate with an epoxy sealed ceramic cover and is designed for adhesive mounting. **Specifications:** • ±1.0% Temp. Performance (with comp resistors, typical) • Supply (typ.): 5.0 VDC • Operating Temp.: -40°C to +125°C

Model 3052 - Adhesive Mount A piezoresistive silicon accelerometer with integral temp. compensation packaged on a ceramic substrate with an epoxy sealed ceramic cover and is designed for adhesive mounting. **Specifications:** • ±1.0% Temp. Performance (typ.) • Supply (typ.): 5.0 VDC • Operating Temp.: -40°C to +125°C

Model 3140 - Bolt Mount A high performance accelerometer intended for instrumentation applications provides a fully signal conditioned output with performance similar to traditional instrumentation accelerometers but at a much lower cost. The accelerometer consists of a silicon micro machined accelerometer with signal conditioning electronics in a lightweight Valox™ housing that can be easily attached to a mounting surface. The sensing element is a micro machined silicon mass suspended by multiple beams from a silicon frame. **Specifications:** • ±2.0% Temp. Performance • Supply (typ.) 12 VDC @ 5mA • Operating Temp.: -20°C to +85°C

BC COMPONENTS Capacitive Humidity Sensor

The capacitive atmospheric humidity sensor consists of a non-conductive foil, which is covered on both sides with a layer of gold. The dielectric constant of the foil changes as a function of the relative humidity of the ambient atmosphere and, accordingly, the capacitance value of the sensor is a measure for relative humidity.

Diffuse Retroflective
Through Beam

Photoelectric sensors consist of a light source and detector for object detection.

Through-beam sensors use a separate transmitter and receiver, which an object must pass between to block the light.

Retroflective sensors is a combined transmitter/receiver in one body and is reflected. A reflector typically is used to return the beam from the x-mitter back to the receiver. Once an object is moved between the reflector and emitter/detector, the receiver output turns on.

Diffuse reflective is a combined transmitter/receiver in one body. Objects are detected by moving an object closer to the sensor directly from the front, rather than from the side. Once an object has come within the sensing distance, the amount of reflected light is sufficient to trigger the receiver output.

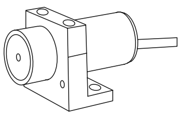
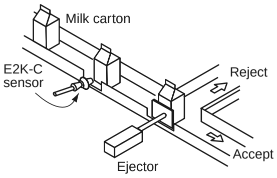
Capacitive Proximity Sensors





Capacitive sensors operate similar to Inductive sensors except that a plate is used instead of a coil in the sensors head. This plate develops a capacitive field between the sensor and ground. When an object comes within sensing distance of the sensor, the capacitive field changes which gets detected by the sensor and turns on the output. Perfect for detecting both metallic and non-metallic objects such as glass, wood, water, oils and plastics. Also works well for detecting liquids and solids in containers.

Fiber Cables for E3X Amplifiers

Premade fiber optic cables that enable very confined mounting spaces and very fast target detection.
Use **Through-beam** for long distance detection where your transmit and receive cable are separated.
Use **Concentric Beam** to detect depth or very targets where eliminating background objects is required. Periscope sensing heads (Side Beam) save space in right angle detecting. Most fiber cables offer IP67 protection and temperature ratings of -40°C to +70°C.

QUANTUM RESEARCH GROUP Sensors

QProx™ / QTouch™ Charge-Transfer (“QT”) General Description:
These are self-contained digital capacitance ICs capable of detecting proximity, touch, and fluid level. With appropriate electrodes they can sense through sealed surfaces made of glass, plastic, stone, ceramic, and wood, up to thicknesses of several inches. This capability coupled with an ability to continuously calibrate leads to new product concepts. They are designed specifically for control panels in home appliances, PC peripherals, machinery, security systems, lighting controls, or anywhere a mechanical switch or button may be found. Versions also available for fluid sensing.

Features: • Projects a ‘touch button’ through sealed panels • Use with simple foil or PCB electrodes • 100% Autocal for life - no adjustments required • Only one external part, an inexpensive capacitor • Less expensive than many mechanical switches.

QT110:
QTouch sensor IC having 10s and 60s recalibration timeouts, 3 gain settings, normal, pulse, or toggle mode outputs, a Heartbeat™ health indication, and a piezo driver for audible feedback of touch. 20µA typical current. Evaluation board: E110.

QT111:
A QT110 variant having recalibration times of 5 minutes and infinity. Evaluation board: E111.

QT112:
A QT110 variant having a faster response time of 49ms worst case, 25ms typical. No piezo drive. Evaluation board: E112.

QT113:
A highly popular QT110 variant having extremely high variable sensitivity and faster response time. No piezo drive. Evaluation board: E113.

QT114:

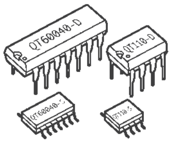
QT115:
A highly popular QT110 variant with variable sensitivity and daisy-chain capability, allowing multiple electrodes to be used next to each other to create multi-key touch panels. No piezo drive. Evaluation board: E115.

QT118H:
This QT110 variant has the basic features of the QT110 but also has the gain capabilities of the popular QT113, at only 20µA of current drain. Active-high output, with piezo drive. Evaluation board: E118H or E110 + QT118H-D chip.

QT140 / QT150 / QT160:
These new QTouch™ devices let you sense 4, 5, or 6 touch keys respectively in one low cost device, making the cost per key very low. These devices feature patent-pending AKS technology to allow proper operation with dense key spacing. Evaluation board: E160.

QT300:
A 2nd generation continuous sensing QProx™ chip that lets you acquire raw signals into your microcontroller, via one of two serial interface types. You can then process these signals to sense fluid level, distance gauging, or material properties. Evaluation board: E3A.

QT310:
A 2nd-generation QProx chip with user-definable setups loadable from a PC via the QTM300CA adapter. Does everything the QT113, QT114, and QT115 can do plus many further advanced features like learn-by-example calibration, variable threshold and hysteresis, fully configurable outputs, and user-defined recalibration timeouts and response time. Especially useful for difficult fluid point-level sensing and prox applications. Evaluation board: E3B.



QT320:
A 2-channel, 2nd-generation QTouch chip with user-definable setups loadable from a PC via the QTM300CA adapter. Does everything the QT113 can do but in two independent channels plus further advanced features like variable threshold and hysteresis, fully configurable outputs, and user-defined recalibration timeouts and response times. Evaluation board: E3B.

QT60040 4-Key QMatrix™ IC:
A 14-pin, 4-key matrix IC requiring only 1 inexpensive capacitor. Has 4 logic outputs. Works through almost any dielectric, like glass, plastic, stone, ceramic, and wood up to 6mm thick. Evaluation board: E604. See Digi-Key website for higher key-count QMatrix™ devices (16, 32, 48, 64 keys), and the E6S3 and E6325 evaluation board series below.

NEW! **QT60161B-AS 16-Key QMatrix™ IC:**
The QT60161B-AS can scan matrix touch keys over LCD panels or other displays when used with clear ITO electrodes arranged in a matrix. It does not require ‘chip on glass’ or other exotic fabrication techniques, thus allowing the OEM to source the matrix from multiple vendors. Materials such as common PCB materials or flex circuits can be used.

QProx™ Evaluation Boards and Modules

Note: All evaluation boards and modules are fully assembled and include all necessary chips, cables, and documentation. All evaluation boards run on batteries, included as noted.

QTM1001AHS Sensor Module:
An advanced ready-to-use sensing module designed for applications such as fluid level and prox sensing in industrial equipment. This "smart sensor" module employs the superior QT method, and incorporates a unique 'cloning' feature that permits user-defined setups to be loaded in from an E2SR board (QTM1001CA also required). Has both analog and switched outputs. QTM1001AHS also has a Heartbeat output signal for critical applications.

QTM1001CA Cloning Adapter:
An interface adapter which allows the module to have its option setups programmed from either an E2SR or E97S board. This device has ATE-style spring 'pogo pins' which mate to the QTM1001AS for rapid, effortless configuration.

QTM300CA Cloning Adapter:
Designed to load setups to the QT310 and QT320 sensor ICs from a PC to modify operating modes and parameters in these chips. The supplied cable allows it to plug directly into an E3B evaluation board. It also works in a stand-alone mode without a PC, and can also clone in-circuit. 8 – 15VDC.

QTM2000 Sensor Module:
A ready-to-use 24-pin DIP module employing the feature-rich QT9701B2 IC and related circuitry. Uses an E297S board to load in setups from a PC. The QTM2000 is a complete industrial-grade solution that can be embedded onto a PCB. Includes analog and switched outputs, and SPI and UART serial ports for digital signal data. 5VDC.

E297S Programmer Board:
This board is used to program the QTM2000's behavior from a PC using included QTWinView software. The E297S also operates the QTM2000 as a fully functional sensor for testing purposes. The board has a ZIF socket for insertion of the QTM2000. 8 – 15VDC.

E2SR R&D Sensor:
Designed specifically for development and experimentation, it incorporates a large variety of user-definable modes and processing options. The unit also acts as a programming device for QTM1001A modules when used with a QTM1001CA cloning adapter. Uses QTWinView PC software, included. 8 – 15VDC.

E604 Evaluation Board:
Designed for rapid evaluation of the QT60040 4-key QMatrix IC. Includes 4 piano-style keys with corresponding LEDs to show touch. Battery included.

E616 16-Key Evaluation Board:
Designed for development of QT60161 based 16-key 'glass touch' scanned matrix circuits. Includes everything required to make a fully functioning through-panel matrix control, including an actual 4x4 matrix and plastic panel. Has an RS232 interface for connection to a PC for operation setup and signal viewing; uses QmBtn PC software, included. 8 – 15VDC.

E6485 / QMatrix Evaluation Boards:
Designed for development of QT60325 / QT60485 / QT60645 based 32, 48, and 64-key 'glass touch' scanned matrix circuits. Includes everything required to make a fully functioning through-panel matrix control including an actual flex matrix and plastic panel. These chips use SPI interfaces but a converter chip on the evaluation board converts this to RS232; RS232 allows connection to a PC for operation setup and signal viewing. Uses QmBtn PC software, included. 8 – 15VDC. For actual chips please visit the Digi-Key website.

E11X Evaluation Board:
This evaluation board kit lets you try out the QT110, QT111, QT112, QT113, and QT118H device, all of which are included. No longer do you have to buy a board for each of these parts to test them out; one kit does it all!

E3A Evaluation Board:
This evaluation board is for the QT300 and upcoming QT301 QProx continuous sensing chips. E3A has an LCD bar graph to show signal strength. A connection via the QTM300CA board will give you a live signal connection to a PC for instant display of signal levels, using QT3View software included with the QTM300CA.

E3B Evaluation/Development Board:
For evaluation and development with Quantum's QT310 and QT320 ICs. Either can be inserted into the 8-pin DIP socket (one of each included). Both parts can be cloned with user-defined setup information from a QTM300CA board using a PC via QT3View software. Batteries and software included.

E160 Evaluation Board:
This new evaluation board demonstrates the awesome capabilities of the QT160 device (and by extension, the QT140 and QT150 which are very similar). This UFO-like board has six backlighted sense areas to make a dramatic demonstration, including the AKS feature.

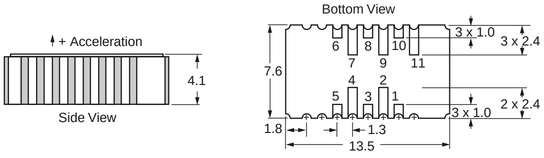
2-Chip Accelerometer

Dim. in mm



The Model 3255 is a two-chip accelerometer designed for low cost surface mount applications. The package can be mounted in one of two orientations, allowing the measurement axis to be either parallel or perpendicular to the mounting surface without the use of costly brackets. It consists of a micro machined silicon mass suspended by multiple beams from a silicon frame. Piezoresistors located in the beams change their resistance as the motion of the suspended mass changes the strain in the beams. Silicon caps on the top and bottom of the device are added to provide over-range stops. This design provides for a very low profile, high shock resistance, durability and built-in damping over a wide usable bandwidth. Each sensor is individually serialized.

Features: • Surface Mount Package • ±0.5% Non-linearity Typ. • Self Test Function • DC Response • Built-in Damping • Built-in Overrange Stops

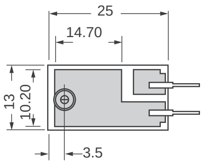
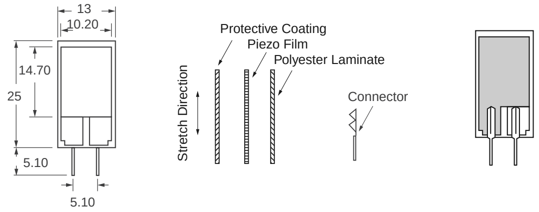
Also available with a mass (M) which provides higher output (mv/g) for higher sensitivity applications.



LDT0-028K High Sensitivity



Typically, a 0.005” (125μm) polyester layer is laminated to a 28μm piezo film element. When used in a “bending” mode, laminated film elements develop much higher voltage output when flexed than non-laminated elements. The piezo film is off the neutral axis in the laminate, and is strained more when flexed.

FABRI-LEVEL™ Kits

FABRI-LEVEL Switch Kits contain all components for complete assembly of a 1- or 2-station level switch unit for pipe-plug mounting in your tank. N.O. or N. C. operation of the SPST switch is selectable by inverting the float(s) on the unit stem.

Each Kit Contains:
1 Tube Connector
1 Mounting Plug
2 Extension Tubes
1 Tube End Fitting
3 Tube Unions
2 Level Stations (Switch,Tube,Float)

Sensors – Float Type Level Switches

LS-3 Series: • Small size engineered plastics • High reliability • Compact Size • Ideal for shallow tanks or restricted spaces. **Part No. 376-1010-ND (46999)**: For external mounting on tanks too small to accommodate internally mounted switches. **Part No. 376-1011-ND (76707)**: For detecting levels as low as 5/8" tank bottom. Use in water, gasoline, some oils and chemicals

LS-7 Series: • Small size engineered plastics • Compact side mounts • Ideal for high volume use in small tanks and vessels • Engineered plastics construction offers broad compatibility in water, oils and chemicals

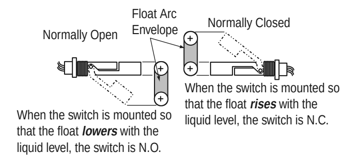
LS-1700, LS-1750, LS-1755 Series: • Small size alloys • Rugged durability with broad heat and pressure capabilities, are hallmarks of these compact switches • Ideal for shallow tanks or restricted spaces

LS-77700 Series: • Bent stem switches • Provide greatest buoyancy of any side mount version • These units perform in liquids with specific gravities as low as .45; switches protrude into tank less than 3 inches

LS-1800, LS-1900 Series: • Large size alloys • A step above our plastic units for pressure capabilities • Excellent stability for general use in oils and water

LS-74780, LS-1900TFE Series: • Large size engineered plastics • For aggressive or ultra-pure liquids • The LS-74780 series is particularly well suited for rough service. Ideal for use in chemical and plating applications • The LS-1900TFE series resists build-up of foreign material or sticky media. Float travel remains uninhibited in viscous or corrosive liquids

LS-1850, LS-1950 Series: • Large size alloys • All stainless steel switches deliver highest pressure/temp. performance • Materials of construction comply with FDA food contact regulations • The LS-1850 series is ultra-light. For use in liquids with specific gravities as low as 0.40 to 0.70. Excellent in a wide range of chemical applications • The LS-1950 Series is exceptionally accurate and rugged for higher temperatures and in pressurized or corrosive liquids. For oils, water and chemicals.



When the switch is mounted so that the float *lowers* with the liquid level, the switch is N.O.

When the switch is mounted so that the float *rises* with the liquid level, the switch is N.C.

LS-800-5 Series: • Large size alloys • Bottle type level switches are ideal for large or small tanks or where access to the inside is impractical or impossible • These units mount completely outside of the tank, at the level actuation point

LS-2050, LS-52100 Series: • Large size alloys • These side mounting units solve the problem of point level sensing in tanks with inaccessible tops or bottoms, or at intermediate locations in larger tanks • Operation is positive and dependable • The float pivots with changing liquid level, displacing a shuttle with magnetically actuates a hermetically sealed switch within the unit • Installation is through the tank side at the detection point

TH-800, LS-270 Series: • Specialty Switches • Ideal for use in oils and water • The TH-800 series temperature/level switch in a single unit. Intermediate in size; single-setting temperature sensor is in bottom of stem • The LS-270 series bracket mounting slosh shield. Small, lightweight, and extremely stable in nonstatic, highly contaminated liquids. Slosh Shielding minimizes effects of turbulence and helps prevent interference by foreign material.

LS-10 Series: • Slim profile for interstitial liquid sensing • Accurately detects the presence of liquid in fiberglass double-wall tanks, containment sumps and double-wall pipes • Dry contact switching ensure dependability throughout its long service life • Reusable sensor easily fits small, interstitial spaces and senses liquid hydrocarbons or water • Unaffected by hydrocarbon vapor, thereby reducing the risk of false alarms • Round design makes it easy to remove, clean and reinstall after an alarm condition is triggered, or for maintenance

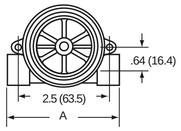
Flow Sensors



Features: Operating Temperature: Brass: -20°F to 212°F (-29°C to 100°C), Polypropylene Body: -20°F to 180°F (-29°C to 82°C)

RFS Series - Flow Set Point Switching: Combines visual confirmation of flow with dynamic, electronic switch operation. Easy, adjustable switch point calibration: a local LED signals when set point is reached.

RFO Type - Flow Rate Monitoring: Output signal for RFO Types is an on/off pulse of the DC voltage supplied to the unit, it is compatible with all digital logic families. Frequency of the output pulse is proportional to the flow rate and ranges from approximately 25Hz at low flow to 225Hz at high flow.

RFI Type - Visual Indicators: A bright orange rotor turning with fluid flow. Simple, direct and reliable. Flow rate is estimated, or simply confirmed, by viewing the speed of the turning rotor. Either port may be used for incoming flow, and bayonet mounting lens is easily removed for quick clean out.

SAFE-PAK® Relays

Amplify Sensor Load-Handling Capabilities

Costly explosion-proof enclosure with their mounting requirements are unnecessary. No purging is required.

SAFE-PAK: Less than 100mA at 9 VDC actuates the unit to control loads to 5A at 120 VAC. Resistive (up to 100,000W) or short-circuiting sensors operate the unit.

Low Sensitivity SAFE-PAK: Sensor closures up to 1000W resistance control resistive loads to 5A at 120VAC.

Latching SAFE-PAK: Momentary actuation, "start-stop" or differential control switching for resistive loads to .3A. Used on any differential control switch for level, flow, pressure or temperature.

Programmable SAFE-PAK: Provide N.O., N.C. or latching output with variable time delays. Designed for use with switches or sensors monitoring flow, pressure, level, etc. Render non-voltage-producing sensors intrinsically safe for operation in potentially hazardous areas. Streamlined housing suited for group-mounting on a common earth-grounded plate for multiple installation.

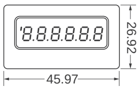
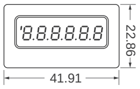
MDMU Miniature Electronic 6-Digit Counter/Timer/Tach

Panel Mount



Circuit Board Mount



• LCD, Positive Image Reflective or Negative Image Transmissive with yellow/green or red LED backlighting • Counter, timer and tach all in a single unit • Rate multiplier/prescaler from 0.0001 to 1.9999 in count and tach modes • 10 ranges in timer mode • Selectable decimal points • 5 VDC powered • Panel mount or PC board mount

DESCRIPTION

The MDMU is a complete 6-digit counter/timer/tach in a small panel or printed circuit board mounted package. It is designed to operate from a 5 VDC power supply. It has a 6-digit LCD with 0.35" (8.89mm) high digits and 5 selectable decimal points. In the timer modes, a flashing annunciator is supplied to indicate that the signal input of the MDMU is active. The displays are available in Positive Image Reflective (black digits, reflective background) or Negative Image Transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

The **Counter** mode can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). A rate multiplier of 0.0001 to 1.9999 and a decimal point of 0 through 0.00000 can be selected using the *Program* mode. Decimal points may also be set using the DP Inputs (Hardware selection). Both the Count (CNT) and LSC Inputs can be used. (Using the *Program* mode options causes the counter to increment on the opposite edge of the Input signal.)

The **Timer** mode and range can be selected by either setting the Mode Select Inputs to the appropriate levels (Hardware selection) or by selecting the range in the *Program* mode. The timing range increments available are 1 msec, 10 msec, 100 msec, 1 sec, 0.1 min., 1 min., 0.01 hr, 0.1 hr, 1 hr, and hr:min:sec. The *Timer Active* annunciator will flash at a 2 Hz rate when the input to the timer is activated. Both the CNT and the LSC inputs can be used. The Inhibit (INH) Input can be used to enable or disable Leading Zero Blanking (LZB).

The **Tach** mode can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). In the **Tach** mode, the MDMU operates as a fixed 1 second time base tachometer. In the *Program* mode, the time base can be set 1 through 7 seconds (in whole second increments). The rate multiplier can also be programmed from 0.0001 through 1.9999. Decimal points can be set from 0 through 0.00000. Decimal points may also be set using the DP Inputs. Both the CNT and the LSC Inputs can be used.

Digital Panel Meters

When choosing a Martel Panel Meter for your application, be aware of the difference between standard versions and "single-ended" versions designated by the suffix "S". Use standard versions with floating (isolated) input signals and use single-ended (S-type) versions when the signal to be measured shares the same ground as the meter's power supply. If in question, contact Digi-Key to obtain full data sheets before ordering.

The DPM1, 2 & 3AS-BL features a negative rail generator which enables the meter to measure a signal referenced to its own power supply GND. LED backlighting ensures excellent readability under low light conditions. The design of the housing allows the module to be easily snapped into a panel. The modules low cost means it will suit high and low volume applications. The DPM1, 2 & 3AS-BL is intended to replace the DPM1, 2 & 3 and DPM1, 2 & 3S, requiring only minor circuit modifications.

Features:

• 5.5mm (0.22") Digit Height • 200mV d.c. Full Scale Reading • 3.0-7.5V or 6.0-15.0V Operation • Auto-zero and Auto-polarity • Programmable Decimal Points • LED Backlighting

Blue LEDs

High Brightness

Max Ratings:

Power Consumption: 120mW
Forward Current: 30mA
Reverse Voltage: 5V
Operating Ambient Temperature: -25 ~ +80°C.
Storage Temperature: -30 ~ +100°C
Water clear lens when off.

Blue LED Precautions in Handling:

A blue LED is sensitive to static electricity and care should be fully taken in handling it. Particularly, when an overvoltage is applied, which exceeds the absolute maximum rating of the blue LED, its energy damages the LED.
